

PROTECTIVE VENTILATION GRILLE

WITH INCREASED CROSS-SECTION S

Using the PROTECTIVE VENTILATION GRILLE WITH INCREASED

CROSS-SECTION WITH

It is used as protection against the penetration of rodents, birds and large insects under the roof surface.

The tabs of the protective grid are connected by flexible connectors - which is important in the case of high-profile roof coverings. There are special locks at both ends of the product, which allow for stable connection of the products into longer sections.

Special protrusions have been designed on the bottom of the grille to facilitate mounting the grille directly on the gutter hooks (without mortising).

Ventilation area approx. 200 cm²/bm

MATERIAL

Polypropylene fully colored

DIMENSIONS

Length: 1m

Grille height: 25 mm

CONSTRUCTION

The product – in a version adapted to the type of roofing material – is placed on the foundation batten and attached to the gutter batten with screws.

In the case of flat roofing (flat roof tiles, corrugated sheets, etc.), a ridgeless ventilation grille should be used.

The bird protection grid should be fixed at the height of the battens and counter battens using screws. The width of the ventilated gap should correspond to the dimensions of the secured area.

COLOR	HEIGHT (mm)	LENGTH (mm)
Black	25	1000
Brown	25	1000
Brick red	25	1000
